Note:	This question paper	-		van all avaations in	Don't A								
	Part A is compulsory which carries 25 marks. Answer all questions in Part A. Part B consists of 5 Units. Answer any one full question from each unit. Each question carries 10 marks and may have a, b, c as sub questions.												
A													
PART- A													
1 a)	Distinguish between	on simple and co	mnound truce		(25 Marks)								
1.a) b.)	Define Tonsion as	officient?			[2]								
(c)	What are the limita	tions of Castigli	ano's theorem?	* * * * * * * * * * * * * * * * * * *	[3]	* * * * * * *							
d)	What are the limitations of Castigliano's theorem? Explain Eddy's theorem. [3]												
e)	What is a propped cantilever beam? What is its static indeterminacy? [2]												
f)	How fixed beams of What is column should be a second of the second of th		cally determina	te?	[3] [2]								
g) : .·.h)			e portal frame.	5 Jr 2***		: .* .***.							
:	List the reasons for Distinguish between	en influence line	diagram and bei	nding moment diag	gram [2]	X 4 4 × × + + + + + + + + + + + + + + + +							
j)	What is the condition for absolute max. bending moment due to moving 'udl'												
	longer than the spa	in?			[3]

× × × ×

	b)	An uniform load of 2000 N/m, 5 m long crosses a girder of 20 m span from left to right. Calculate the Max. Shear force and bending moment at a section 8 m from left hand support. A train of three wheel loads of magnitude 45 kN, 90 kN and 90 kN passes over a span of 40 m. The horizontal distance between the loads is 5 m and 10 m. Find the greatest bending moment. [5+5] An uniformly distributed load of 40 kN/m and of length 3 m transverse across the span of simply supported length of 18 m. Compute the maximum bending moment at 4 m from the left support and absolute bending moment. [10]
